

# TYPES OF HEARING LOSS & GOOD COMMUNICATION TACTICS

## AUDIOGRAM OF FAMILIAR SOUNDS

### Mild

May have difficulty following speech, especially in noisy situations. This type of loss is often noticed by family first.

### Moderate

Often has difficulty following speech and misses other quiet noises. Amplification is very successful for this loss, but you also need to use good hearing tactics.

### Moderately severe

Unable to hear speech even in quiet surroundings and may not hear general noises such as traffic unless they are loud. Amplification is very successful for this loss, but you also need to use good hearing tactics.

Lip-reading classes could benefit people with this hearing loss.

### Severe

Unable to hear most sounds unless they are very loud. Amplification is often useful, but you will also need to rely on good hearing tactics. Lip-reading classes would also be useful for people with this hearing loss. If you fall into this category, you may also use sign language and watch sign assisted programmes.

### Profound

Will need to wear appropriate amplification technology (e.g. hearing aids, cochlear implant, FM) in order to hear conversational speech.

Here are some handy tactics that may help you hear more easily. It may be helpful to introduce them to your family and friends.

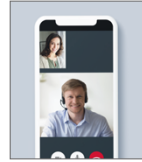

If you are experiencing difficulties communicating with a particular person or in a specific situation, the best thing to do is explain these tactics to them as it's likely they are not aware. Once they understand this they can help make the situation easier for you.

# SIGNIA APP: GREATER CONVENIENCE

ALL YOUR NEEDS, ALL TOGETHER  
FUNCTIONALITY AT A GLANCE

## TELECARE

Stay in closer contact with your hear care professional:

- Real-time contact via text message, voice call or video call
- Intuitive monitoring of your daily satisfaction
- Set virtual appointments for the precise remote adjustment of the hearing aids

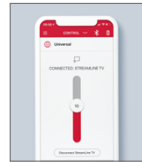

## REMOTE CONTROL

Personalise your hearing experience further:

- Hearing program and volume control
- Sound Balance Adjustment
- 360° Spatial Configurator for individual adjustment of directionality
- Continuous monitoring of the hearing aids connection and battery status

## CONNECTIVITY & STREAMING

- Easy management of audio streaming accessories (e.g. StreamLine TV, StreamLine Mic) as well as CROS devices
- Volume level control while streaming
- Adaptive streaming volume

The Signia app is compatible with Android and iOS. Downloading it from the Apple App Store or Google Play Store is free of charge.

# SIGNIA ACCESSORIES OVERVIEW

CONNECTIVITY AND CONTROL AT YOUR FINGERTIPS

Whether changing settings remotely or streaming audio, Signia's broad range of stylish, practical, and easy-to-use accessories makes everyday life easier for you as a hearing aid wearer.

## STREAMERS

### StreamLine TV

Programmed for superb sound

### StreamLine Mic

Hands-free connectivity in premium stereo quality

### Smart Connect

Effortlessly connected, seamlessly integrated

## REMOTE CONTROL

### miniPocket

Ultimate discreet control

## TRANSMITTER

### Smart Transmitter

Connecting TVs without Bluetooth to your Smart Connect

All of the Signia Accessories are usable 'out of the box' – meaning that your Hearing Care Professional doesn't need to program them prior to use.

Simply, connect and control!
